

# Functions and Class

## Functions:

Functions have a set of programming statements .It can be called at any location and return result . When the same programming statements use maximum place then we can use Functions.this proces save time and best practice for write code which help in programm maintenance and any future

Run this code:

Example:

```
void main() {  
    print("Sum Result = ${SumCalculator(3, 7)}");  
  
    int result=SumCalculator(10,10);  
    print("sum of 2nd reuslt =$result");  
    Sum2nd();  
}
```

//this called parameterized functions

```
int SumCalculator(x,y){  
    var z=x+y;  
    return z;  
}
```

//normal functions

```
void Sum2nd(){  
    var x=20+20;  
  
    print("sum of =$x");  
}
```

## Class:
